

Muhammad Gad

Frontend Engineer

gad.software@outlook.com | +201069429820 | [LinkedIn profile](#) | [GitHub profile](#) | [Portfolio](#) | Tanta, Al-Gharbia, Egypt

Skills:

- Libraries & Frameworks: Next.js (App Router), React, Redux Toolkit, React Router, TanStack Query (React Query)
- Languages & Core Web Technologies: JavaScript, TypeScript, HTML5
- Styling & Animation: CSS3, Tailwind CSS, Sass, Styled Components, Motion (Framer Motion)
- Web Extensions Development: Plasmo Framework, Chrome Extension APIs, Chrome Storage API
- Backend Integration & Auth: Supabase, NextAuth.js

Professional Experience:

- Frontend developer InternNovember 2023 – May 2024 | Remote
- Professional internship in Front-End Development at Almdrasa, focusing on mastering techniques through an intensive curriculum.

Featured Projects:

- [YouTube Tweak \(Chrome Extension\)](#)important for every YouTube user to use.
- Project Description:** A Chrome extension designed to declutter the YouTube user interface, restore sanity to your timeline, and eliminate addictive UI patterns.
 - Built for power users who value their time and focus.
 - Technologies Used: **React, TypeScript, Plasmo Framework, Sass, plasmohq-storage, Chrome Extension Storage API**
 - Main Features:** Quick Search, Disabling Infinite Scroll, Enabling Intentional Browsing, Absolute Timestamps, Customization of Date Format, and more coming soon.

Bookmarks Finder (Chrome Extension)

- Project Description:** A fast, keyboard-first Chrome extension popup for searching and handling your bookmarks.
- Technologies Used:** React, TypeScript, Plasmo Framework, Chrome Extension Storage API
- Built for users with huge bookmark lists, providing instant keyboard search and effortless navigation.

The Wild Oasis — Admin Dashboard

- Technologies Used:** React, React Router, Vite, TanStack Query, Supabase, Tailwind CSS, Motion, Recharts, date-fns, React Hook Form, React Error Boundary, React Hot Toast, React Icons.
- Created** a full-stack internal administration dashboard utilizing a **feature-based architecture**, secure role-based Supabase authentication, and protected routing.
- Managed** server-state optimization using TanStack Query for data fetching, caching, and mutations across cabin CRUD operations and check-in workflows.
- Integrated** business analytics charts using Recharts for occupancy trends and structured data validation using React Hook Form.

The Wild Oasis — Guest-Facing Website

- Technologies Used:** Next.js (App Router), NextAuth v5, Supabase, Tailwind CSS, Styled-Components, date-fns, heroicons
- Architected** a guest-facing hotel website utilizing Next.js Server Components for data rendering and Server Actions for backend database mutations.
- Integrated** NextAuth v5 for Google OAuth, creating custom callbacks to provision and link guest accounts in Supabase automatically.
- Developed** an interactive reservation system with live pricing calculations and automated date-range blocking based on existing database bookings.

Education:

- Bachelor's degree, Aerospace Communication, Beni-Suef University2020 – 2025 | Beni-Suef, Egypt
- Focus Area: Aerospace Communication, Satellite, Navigation Technologies.
